

the
Minnehaha Creek
Watershed District
presents

in cooperation with

TonkaBlue

Great green lawns of greasy, grimy
phosphorus.
To the gutters from the street
Now disgusting waters were once
so sweet.

Fertile but Phosphorus Free.

Americans spend 6 billion dollars each year on lawn care, not factoring the environmental impact lawns can inflict. Our lake is green because we over fertilize our grass and insist upon having rocky, rip rapped shoreline. Reduce your lawn size, mulch grass, use non-phosphorus fertilizers, and establish native buffers along water fronts.

Stop.
and think about your water
