Leaves & Grass

Yard Waste? I think not
Much value still remains
Mulch that grass, compost those
leaves, and do it before it rains.

**No Leaves or Grass in
Gutters Please.**

Storm drains wash grass clippings
and leaves into lake and rivers.
When too much grass and leaves
end up in our waters they create an
excess of nutrients. These excess
nutrients disturb the natural
balance and can damage water
quality.

Stop.
and think about your water
